Group Assignment Theme

Subject

A `Recruiting System` which will support corporate overall hiring process - from every possible aspect.

Detail

Your team is playing the role of `Software Vendor.`

Providing `Complete Recruiting Solution` to various kinds of corporations.

Your system should be able to sell to different companies. (as a package or as a service).

1. You can put any assumption freely

   At that time, you have to consider and define what `Recruiting Process` is, and who are the `involving parties.`

   Start from the recruiting process you know, think about corporation structure, and what are the possible aspects to support the whole process.

2. You can assume any business situation freely

3. You have to implement more than one special function for "recruiting" dedicated support, not a general personnel management.

   At that time, you have to explain something to mentor listed below.

   - Business situation

   - Why your function will be customer's merit

     (What is your special function which improve client business)"

4. Think about the topic independly first.

   When group arrangement is done, discuss your ideas in SCRUM Planning MTG.

   Make clear of your team's assumption, ground truth to discuss, business scope and direction there.

   And start designing feature / system as a team.

Supplement Description

You cannot propose unpractical new business model that highly possibly not existed in the world right now.

You must clearly define:

1. Which business process you are looking for

2. What operations you are focusing on

3. Why you choose them.

What to Do / Submit

During 4-5 weekly iterations, gradually complete your team's:

1. Feature Design

2. System Design

3. Code

4. Deliver / Deploy Flow Management

5. Documents related above

Manage your documents/codes on gitlab, this assignment on STM System is only for announcement, not submission.
